USER GUIDE · ANDROID & IOS

Every renewal. Every field. Explained.

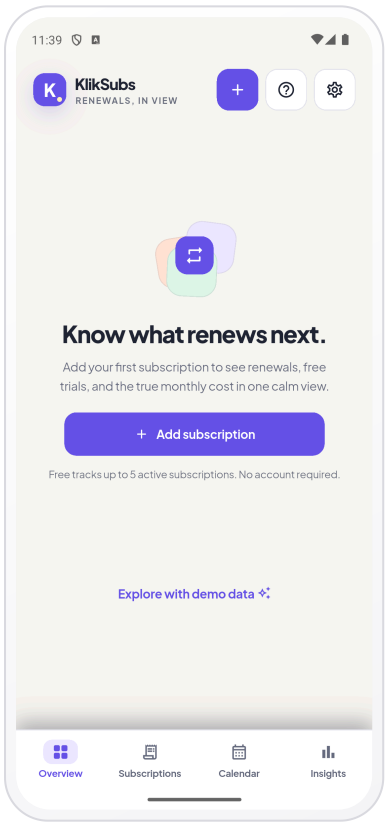

The complete KlikSubs guide: add a subscription, understand the difference between monthly equivalent and money due this month, set reminders that actually fire, and keep multi-currency totals honest. Every screen is shown with a real screenshot.

- **Offline-first** local data
- **No account** · no bank link
- **161** fiat currencies
- **10** languages

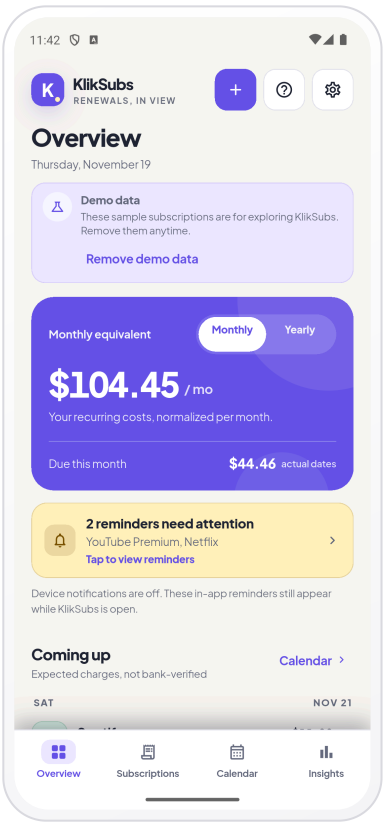

01 START HERE

A private record of what you pay for.

KlikSubs is a subscription tracker, not a payment app. It never connects to your bank and never asks for a login. Your plans, prices, notes, and attachments live in a local database on your phone. That makes the app fast, usable offline, and private by default.

First launch. Add your first plan, or explore with demo data.

After adding plans. The whole picture sits on one screen.

Local-first

SQLite is the source of truth. No account, no sync server, no mandatory network.

OS-scheduled reminders

Notifications are scheduled by the operating system, not by a background timer.

Honest currency math

Original amounts are kept. Missing rates make a total partial — never 1:1, never zero.

Your first five minutes

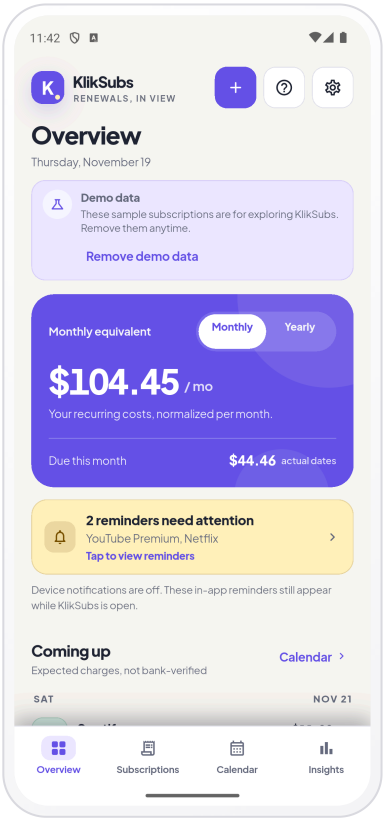

1. **Add one plan.** Tap the **+** button, enter a name and amount, then pick the next billing date.
2. **Read the hero card.** Monthly equivalent normalizes every cycle to one month. Due this month counts only what is scheduled this calendar month.
3. **Open the Calendar.** Every expected charge, trial end, and cancellation deadline appears on its civil date.
4. **Turn on notifications.** In Settings, allow device notifications and, on Android, exact alarms if available.
5. **Add the rest.** Free tracks up to five active subscriptions. Pro removes the limit.

✦ **Demo data is clearly marked.** Use *Explore with demo data* to try every screen, then remove it in Settings. Demo records never touch your real records.

02 THE OVERVIEW

Two numbers that are easy to confuse.

The Overview is the app's home. The hero card shows the number most trackers get wrong: **monthly equivalent** is not the same as **due this month**. One normalizes every cycle; the other counts only charges scheduled in the current month.

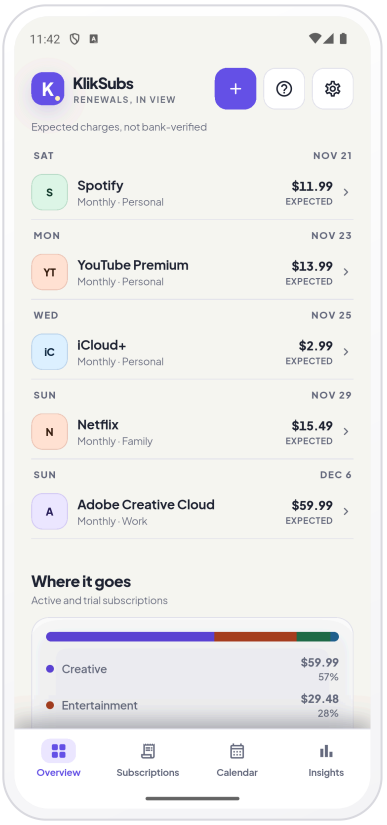

A. The hero card. Tap *Monthly* or *Yearly* to switch the big figure.

ELEMENT	WHAT IT MEANS	EXAMPLE
Monthly equivalent	Every active and trial plan, normalized to one month. Weekly, quarterly, yearly, and custom cycles are converted. It is a run-rate, not a bill.	$104.45/mo
Due this month	Only charges scheduled in the current calendar month. A yearly plan that renews in March contributes nothing here in November.	$44.46
Yearly toggle	Multiplies the current prices by twelve. It is a projection, not a contractual commitment.	$1,253.40/yr
Partial total note	Someone's currency has no rate. The total is deliberately incomplete and labelled.	"Partial: 1 currency missing"
Estimated	The total includes a converted amount. The original amount is untouched.	€15.49 → $16.92

Coming up

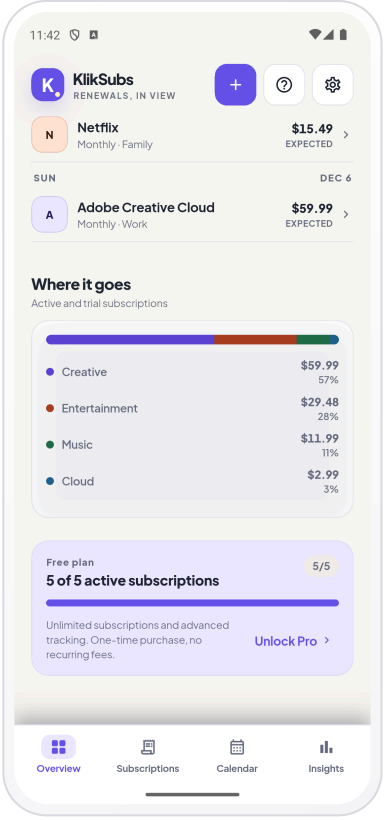

The next five expected payments, grouped by date. Rows carry the service color, the cycle, the group, the original amount, and an *Expected* label. A payment is always expected until you record it. KlikSubs never marks a charge as paid on its own.

Expected charges, grouped by the day they land.

Where it goes

The category bar and rows show the share of your monthly equivalent. Percentages are based on the same normalized figure as the hero card, so weekly and yearly plans are comparable. Below it, the plan card shows how many active subscriptions Free covers.

Category mix, then the Free/Pro plan card.

> **Reminder cards appear only when action is needed.** A trial ending soon or a cancellation deadline inside the horizon shows a card above “Coming up”. Tap it to open the reminder list.

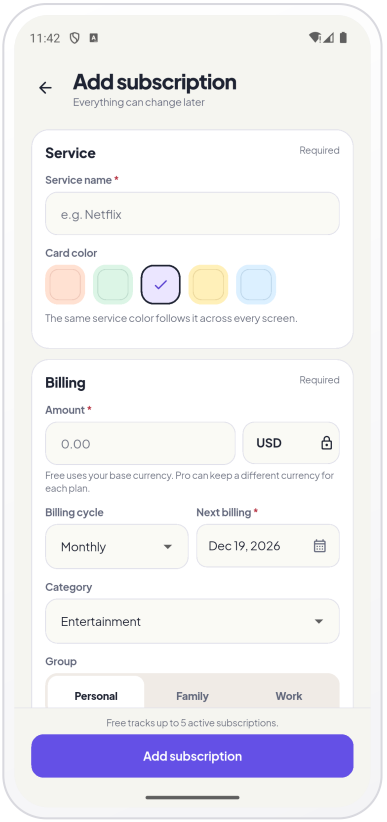

---

03 ADD A SUBSCRIPTION

One form, nine sections, every field optional except two.

Only **service name**, **amount**, and **next billing** are required. Everything else can be added later. The form is long on purpose: it is the single place where a subscription’s terms live.

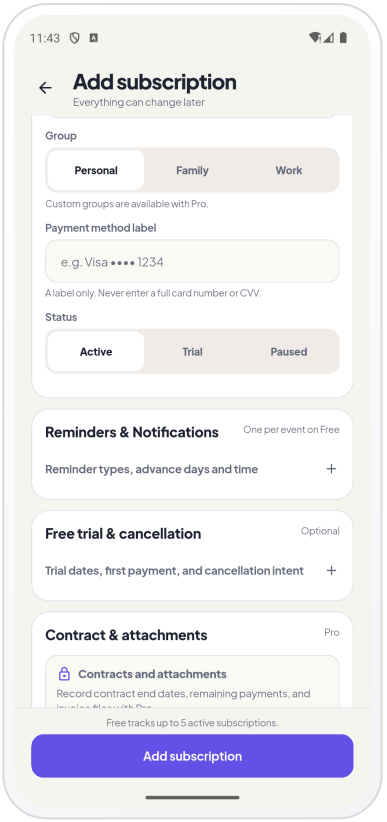

Service

The top of the form: service, amount, and the first billing details.

FIELD	WHAT TO ENTER	NOTES
Service name Required	The plan's name, e.g. "Netflix".	Used on cards, detail, calendar, and reminders.
Card color	Peach, mint, violet, yellow, or sky.	The same tone follows the service across the app.
Amount Required	The price in the plan's own currency.	Must be greater than zero. Money is stored in minor units, never floating point.
Currency	The currency the provider bills in.	Free uses the base currency. Pro can keep a different currency per plan.
Billing cycle	Weekly, monthly, quarterly, yearly, or custom months.	Custom cycles use a whole number of months.
Next billing Required	The next expected charge date.	Civil date. End-of-month anchors are preserved.

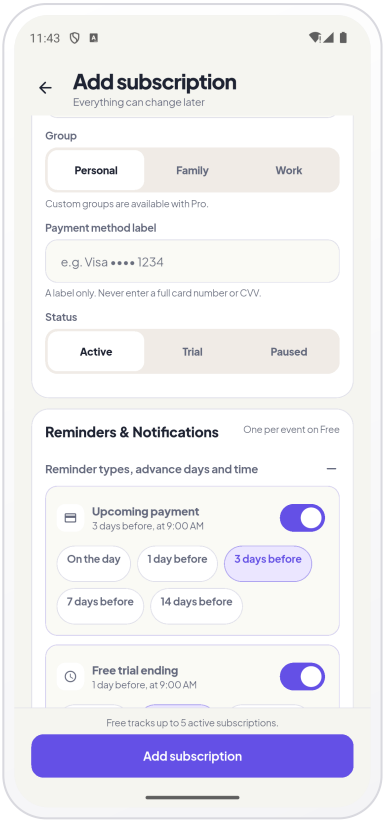

Category, group, payment method, status

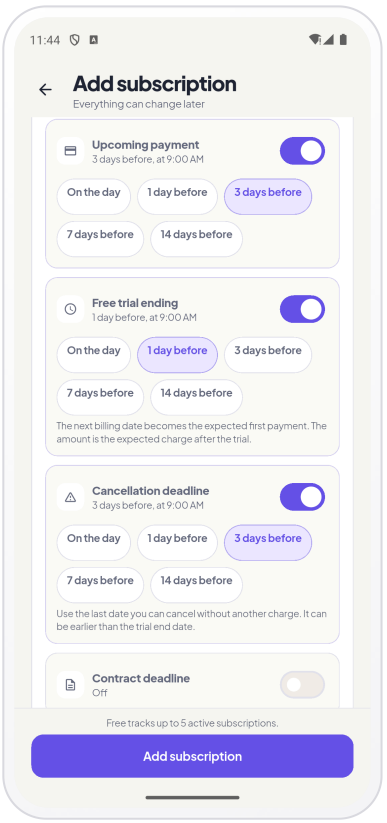

Category and grouping drive the overview mix; status drives totals and reminders.

FIELD	WHAT IT DOES
Category	Feeds the “Where it goes” mix and the category filter. Custom categories are a Pro feature.
Group	Personal, Family, Work, or a custom group. A custom group replaces the selected standard group.
Payment method label	A label only, such as “Visa •••• 1234”. Never enter a full card number or CVV. The app validates and rejects long digit strings.
Status	**Active**, **Trial**, **Paused**, or **Cancelled**. Paused and cancelled plans stop contributing to active totals.

Reminders

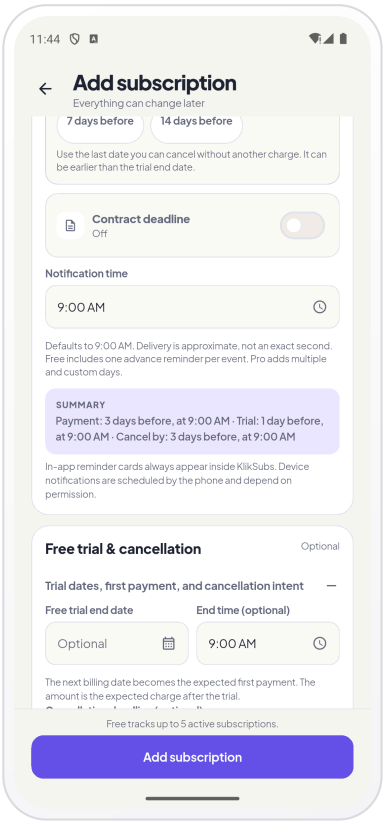

Reminder types expand to show advance days and a time.

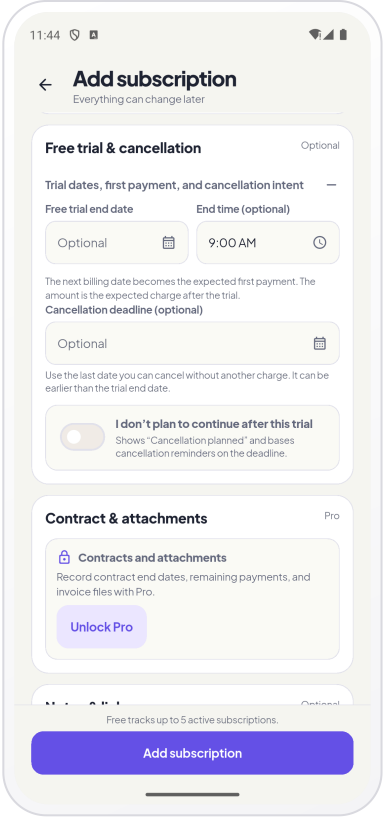

Advance days and the notification time for each event type.

REMINDER FIELD	WHAT IT DOES
Reminder type	Upcoming payment, trial ending, cancellation deadline, or contract end.
Advance days	0, 1, 3, 7, or 14 days before, plus custom days with Pro. Free includes one advance reminder per event.
Notification time	The local time used for the device alert. Delivery is approximate; Android may batch or delay it.
In-app cards	Always appear inside KlikSubs, even when device permission is missing. Device notifications are a separate layer.

Free trial & cancellation

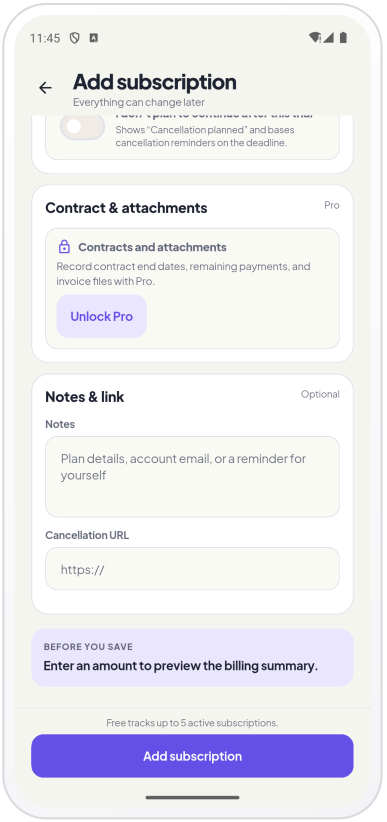

The trial end date becomes the expected first payment date.

The cancellation deadline can be earlier than the trial end date.

FIELD	WHAT IT CHANGES
Free trial end date	Switches the schedule to "trial ends, then first payment". The next billing date becomes the expected first payment.
End time	Optional local time for the trial end.
Expected amount after trial	The charge you expect when the trial converts.
Cancellation deadline	The last date you can cancel without another charge. May be earlier than the trial end.
I don't plan to continue	Marks "Cancellation planned" and bases cancellation reminders on the deadline. KlikSubs still does not cancel with the provider for you.

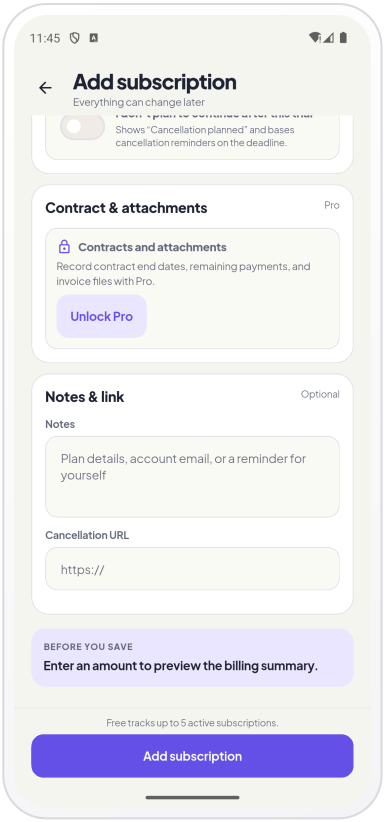

Contract, attachments, notes, and link

Notes, a cancellation URL, and the final review card.

FIELD	WHAT IT DOES
Contract end date Pro	Records the end of a minimum term so it can appear on the calendar and in Insights.
Remaining payments Pro	A whole number you supply. KlikSubs does not infer it from the billing cycle.
Invoice or contract Pro	Copies a PDF, image, or document into app storage. Picker cache paths are never stored.
Notes	Plan details, account email, or a reminder for yourself.
Cancellation URL	A full http(s) link to the provider's cancellation page. Opened outside the app.

Before you save

The summary restates the amount, cadence, next date, and any trial or cancellation plan.

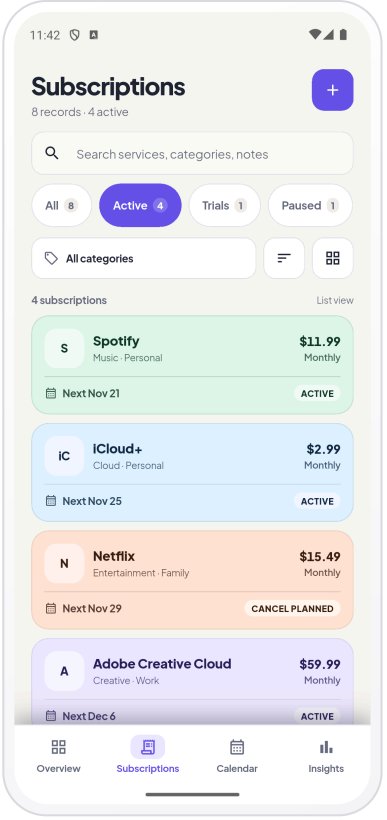

> ! **Free limit: five active subscriptions.** If you are at the limit, the form is preserved and saving is blocked until you pause/cancel a plan or unlock Pro. The limit counts active and trial records, not paused or cancelled ones.

---

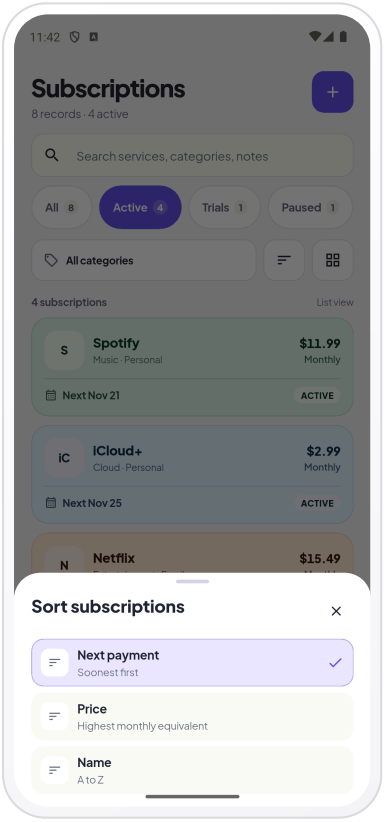

04 MANAGE & DETAIL

Find a plan, then read its whole story.

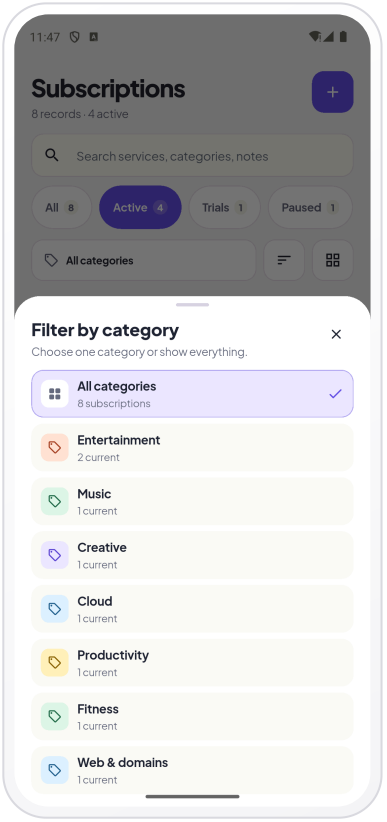

The Subscriptions tab lists every record with search, category filtering, and sorting. Tap a card to open the detail screen: billing terms, deadlines, payment history, price history, reminders, attachments, and the actions that change the record.

The list keeps the amount, cycle, group, and status visible.

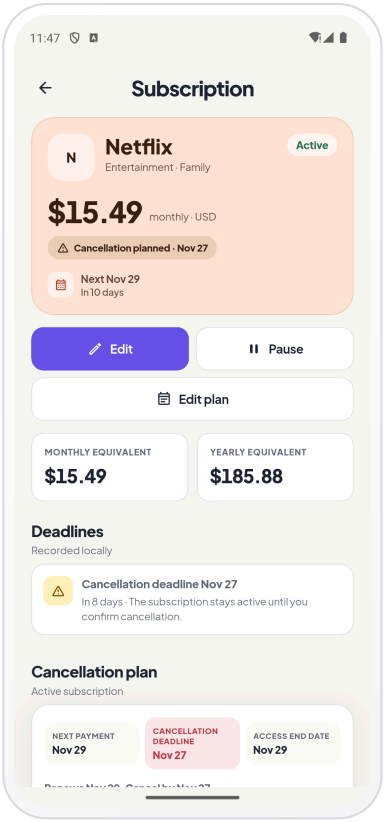

Sort by next payment, name, or amount.

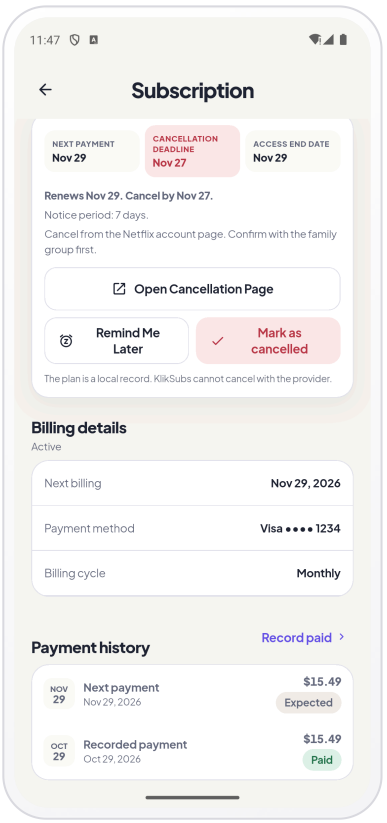

Filter by category. Custom categories are Pro.

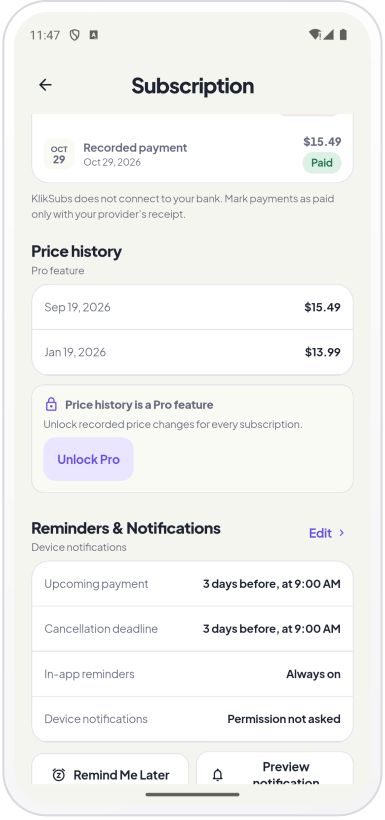

The detail screen

The top card: next charge, monthly equivalent, status, and the primary actions.

Billing details and deadlines. Every value is editable.

Payment history, then price history (Pro) and price changes.

DETAIL ELEMENT	WHAT IT TELLS YOU
Next charge	The next expected payment and its date. When a trial is active, this becomes the expected first payment.
Monthly equivalent	The same normalized figure used on the Overview, for this plan only.
Status	Active, trial, paused, or cancelled. Pausing stops totals and reminders without deleting history.
Deadlines	Trial end, cancellation deadline, and contract end. Overdue deadlines are highlighted.
Payment history	Charges you recorded. Each record stores the amount and the exchange rate used at that moment.
Price history Pro	Past and scheduled price changes. A future change does not alter the current amount until its effective date.
Attachment Pro	The local invoice or contract file copied into app documents.
Notes	Free text stored with the record.

Actions you can take

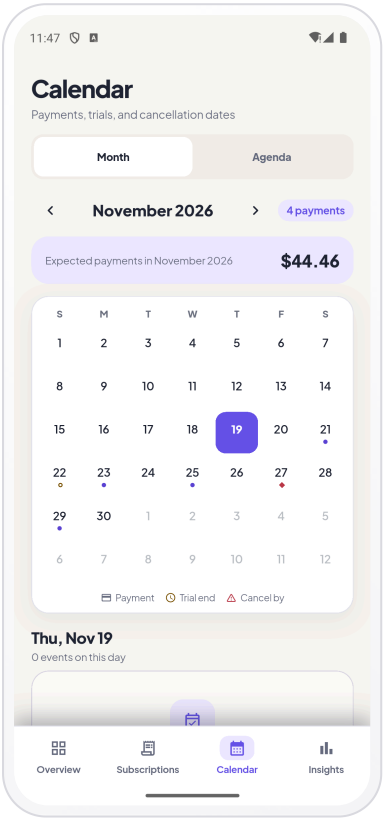

- **Record as paid.** Adds a payment to history. For foreign currencies it snapshots the rate and base amount at that moment; later rate refreshes never rewrite it.
- **Pause / resume.** Temporarily removes the plan from active totals and reminders without losing history.
- **Cancel / reactivate.** Marks the record cancelled. This is a local note: you still cancel with the provider.
- **Edit.** Opens the same form in edit mode. Changes stay local to the device.
- **Delete.** Removes the record permanently. Cancel is usually the better choice for history.

✓ **Expected never means verified.** KlikSubs does not connect to a bank. A charge stays “expected” until you record it, so the history is a record of what you confirmed, not a guess.

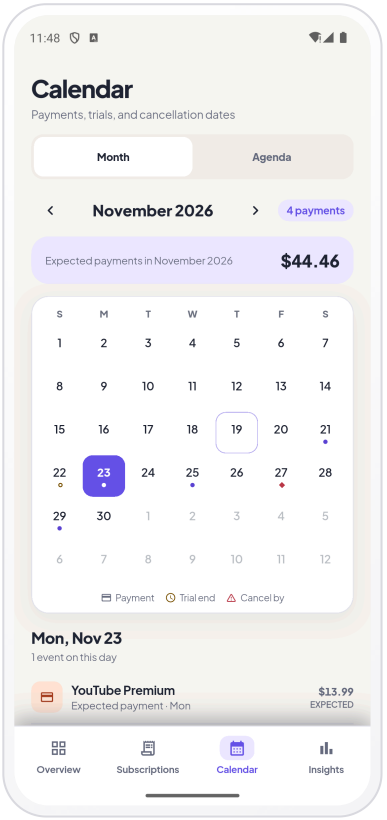

05 CALENDAR

Every date that costs money, on one grid.

The Calendar mixes four event types: expected payments, trial ends, cancellation deadlines, and contract ends. Month view shows the grid; Agenda scans the next 45 days without flipping months.

Month grid with markers. Tap a marked day.

The day panel lists each event with its type.

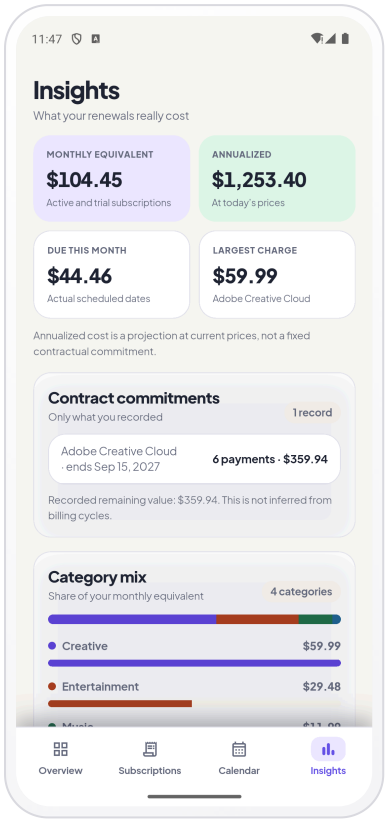

EVENT	MEANING
Expected payment	A charge scheduled on that civil date. It stays expected until recorded.
Trial end	The day a free trial finishes. If a first payment is expected, it is shown with the plan.
Cancellation deadline	The last day to cancel without another charge.
Contract end	The end of a recorded minimum term (Pro).
Agenda · Next 45 days	A chronological list of everything inside the 45-day window.

i **Civil dates, not timestamps.** A plan set to renew on the 31st keeps its end-of-month anchor. February shows the 28th/29th instead of silently sliding to March.

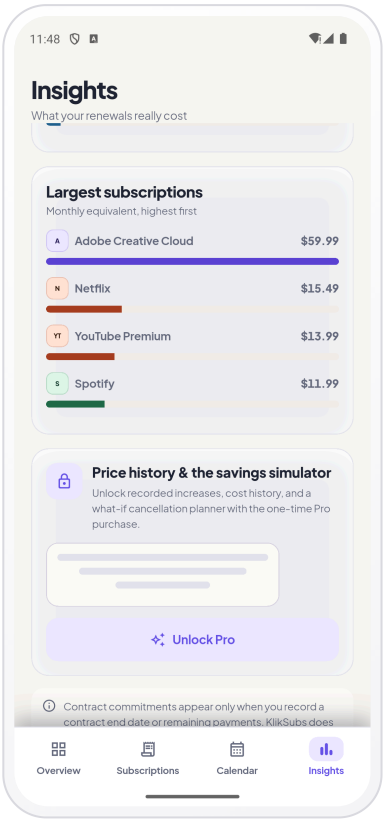

06 INSIGHTS

Where the money actually goes.

Insights separates four different questions: what you pay per month, what that becomes in a year, what is due this month, and what you are contractually committed to. They are deliberately not merged into one number.

Run-rate, annualized, this month, and the largest single charge.

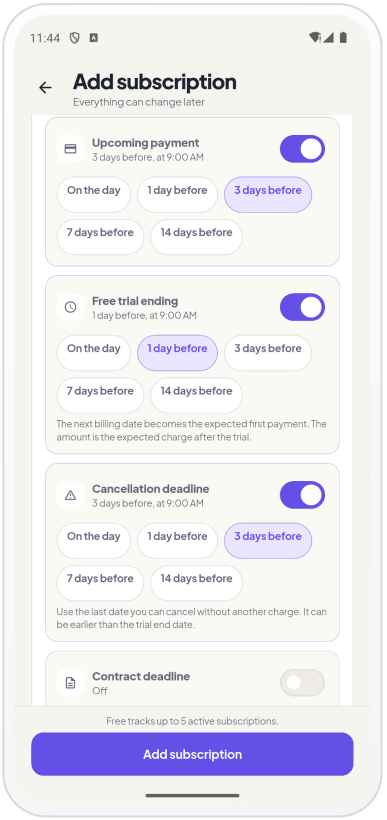

Largest subscriptions, then the Pro-gated history and simulator.

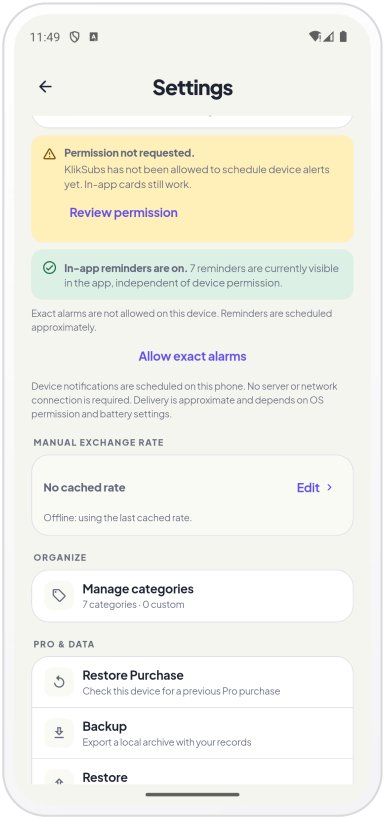

CARD	QUESTION IT ANSWERS
Monthly equivalent	What does my current set of plans cost per month? Uses today's prices.
Annualized	What is the yearly projection at current prices? Not a fixed contractual commitment.
Due this month	What is actually scheduled to leave my account this calendar month?
Largest charge	Which single plan is the biggest monthly equivalent?
Contract commitments Pro	Recorded remaining payments and end dates. KlikSubs never infers them from a billing cycle.
Category mix	The share of monthly equivalent by category.
Price increases Pro	Changes you recorded, so a quiet increase is visible.
Recurring cost over time	Recorded payments over six months. Needs history to draw.
What if I cancel? Pro	A preview only. Selecting a plan does not pause or cancel it.

Two layers: in-app cards and OS notifications.

In-app reminder cards always work, even when notification permission is missing. Device notifications are scheduled by the phone and are the layer that can reach you when the app is closed. They need permission, and on Android, exact alarms for on-time delivery.

Each event type has its own advance days and time.

Settings shows permission state, in-app status, exact-alarm status, and the test button.

CONTROL	WHAT IT DOES
Device reminders	Master switch for OS-scheduled alerts. Does not stop in-app cards.
Permission	Android 13+ and iOS require notification permission. Settings shows Granted, Denied, or Not asked.
Exact alarms (Android)	Without this, Android may deliver reminders late. KlikSubs offers a shortcut to the system setting.
Default reminder	The advance days new subscriptions start with.
Default time	Used when a subscription has no custom time.
Test notification	Schedules one immediate test so you can confirm the OS path works.

! **Battery optimization can still delay alerts.** Delivery is approximate and controlled by the OS. KlikSubs schedules through the operating system; it never uses a Dart timer for delivery.

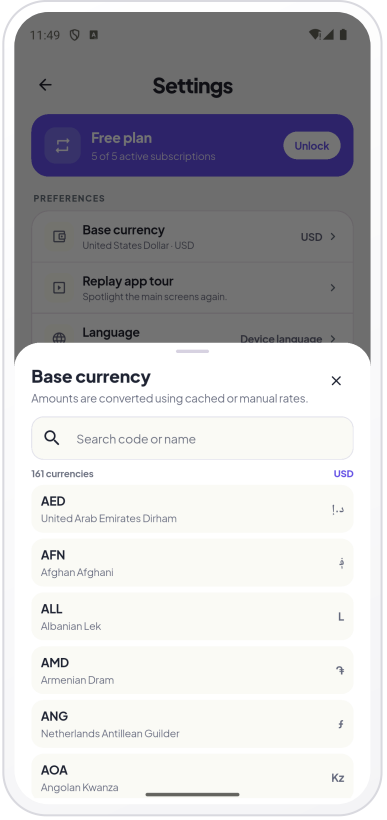

What gets a reminder

- **Upcoming payment** — before the next expected charge.
- **Trial ending** — before a free trial converts.
- **Cancellation deadline** — before the last day to cancel without another charge.
- **Contract end** — before a recorded minimum term ends (Pro).

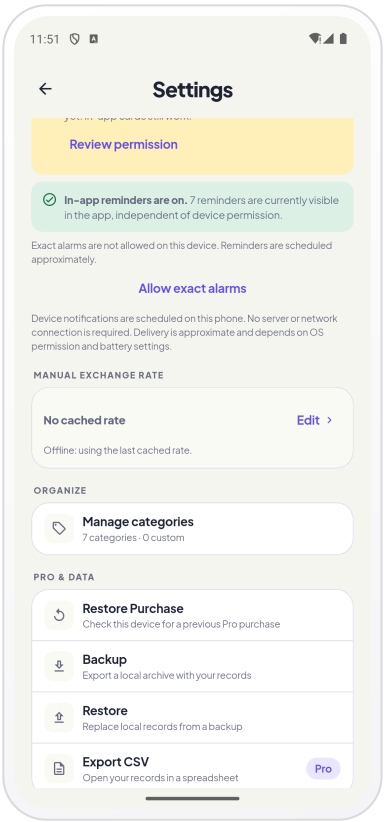

08 MULTI-CURRENCY

One total, without inventing a rate.

KlikSubs keeps every charge in its original currency and converts it into one base currency you choose. It uses Frankfurter v2 rates, caches them with a source date, and refuses to fake a conversion when a rate is missing. A total that cannot be completed is labelled partial.

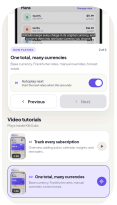

The base currency picker searches all 161 fiat currencies by code or name.

Rates show their source date. Manual rates stay until cleared.

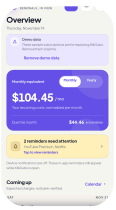

CONCEPT	BEHAVIOR
Base currency	The reporting currency for totals. Changing it never rewrites a plan's original amount.
Original amount	Kept exactly as entered, with its own ISO code and decimal count.
Frankfurter v2	Fiat rates from api.frankfurter.dev. The request contains currency codes only, never subscription names or amounts.
Source date	Shown with the cached rate. A stale cache is labelled offline.
Refresh limit	Automatic refreshes are limited to once every six hours.
Manual rate Pro	Wins over a remote rate until you clear it. It is marked "Manual rate, not live".
Partial total	A missing rate removes that plan from the completed sum and adds a note. Missing is never 1:1 and never zero.
Payment snapshot	Recording a payment stores the rate and base amount used at that moment. Later rates do not rewrite history.

One total, many currencies

The 90-second video version of this page.

1:30 · YouTube

Track every subscription

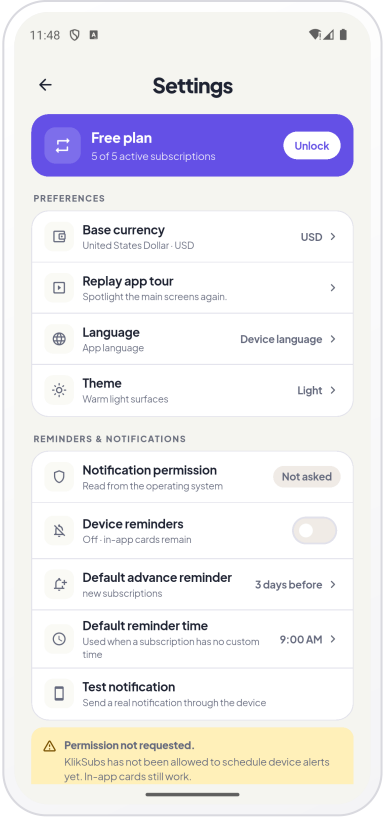

The full 2½-minute tour, including reminders.

2:30 · YouTube

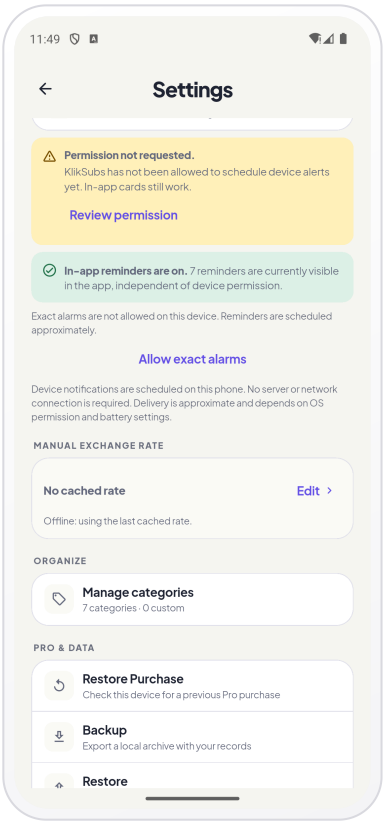

09 SETTINGS

Every control in one list.

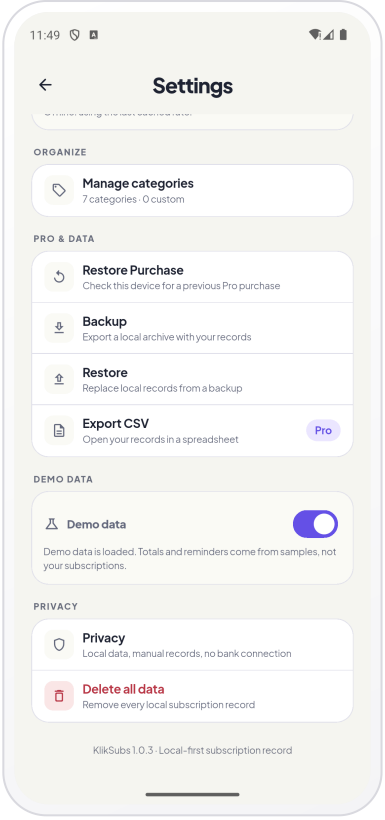

Settings is organized into Preferences, Reminders & notifications, Manual exchange rate, Organize, and Pro & data. The version line at the bottom is the fastest way to confirm which build you are running.

Preferences: currency, appearance, language, and the app tour.

Reminder permissions and defaults.

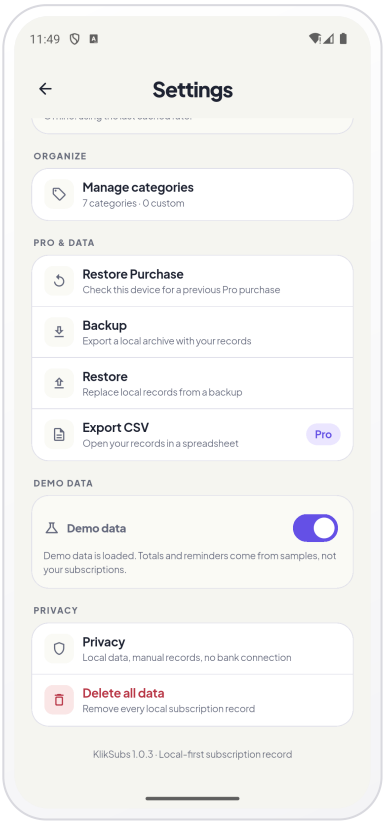

Backup, export, demo data, privacy, and delete-all.

SETTING	WHAT IT DOES
Base currency	Changes the reporting currency for totals. Does not rewrite original amounts.
Manual exchange rate Pro	Edit or clear a manual rate. Shows the cached source date.
Appearance	System, light, or dark.
Language	10 languages. The app follows the device by default.
Replay app tour	Runs the eight-step spotlight tour again.
Default reminder	Advance days for new plans.
Default time	Used when a plan has no custom time.
Categories	Built-in and custom categories. Custom categories are Pro.
Device reminders	Master OS notification switch.
Backup & restore	Local .kliksubs archive. See the next section.
Export CSV	One spreadsheet-friendly file with your records.
Demo data	Loads sample records marked as demo; remove them anytime.
Privacy	Explains local storage, manual payment history, and the no-bank link.
Delete all	Confirms, then removes local records. Not reversible without a backup.

10 BACKUP & EXPORT

Your data is local. Treat the backup like it.

KlikSubs creates a local `.kliksubs` archive with subscriptions, history, settings, categories, exchange rates, and — with Pro — attachments. There is no cloud account and no automatic sync. If you lose the phone and the archive, the records are gone.

Backup, restore, and CSV export live together under Pro & data.

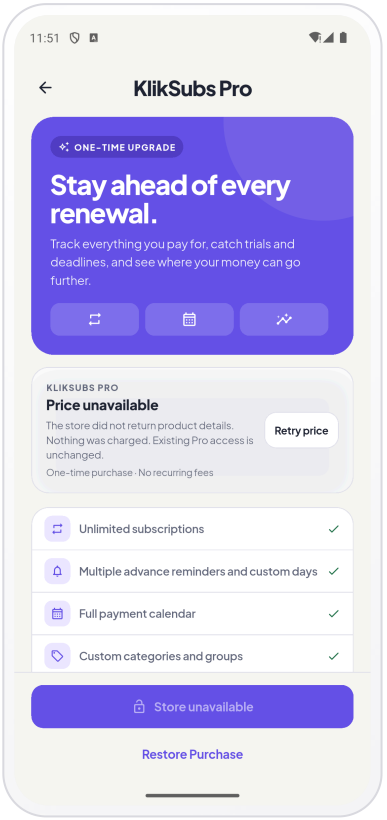

ACTION	DETAILS
Create backup	Writes a .kliksubs archive and opens the share sheet. Store it somewhere you control.
Include attachments Pro	Free backups omit attachment files. Pro includes them.
Restore	Validates the archive before replacing data. A malformed file is rejected instead of half-imported.
Pro status	Never imported from a backup. Pro follows the store account and the local entitlement, not the file.
CSV export	A spreadsheet-friendly export for analysis. It is not a full restore archive.

! **Backups are manual.** There is no scheduled cloud backup. If losing this phone would lose the records, create an archive now and keep it off-device.

11 KLIKSUBS PRO

One purchase. No subscription to track your subscriptions.

Pro is a one-time, non-consumable purchase. The price comes from the App Store or Google Play in your local currency; KlikSubs never hardcodes it. Entitlement is stored with the store receipt on the device, and Restore Purchase re-checks the store account.

The Pro screen. If the store returns no product, purchasing stays disabled and nothing is charged.

Unlimited records
No five-active-subscription limit.

Deeper reminders
Multiple advance reminders and custom days.

Per-plan currencies
Keep each plan in its own currency, not just the base currency.

Contracts & files
Contract end, remaining payments, and local attachments.

Price history
Record increases and future price changes.

Custom categories
Custom categories and groups for your own taxonomy.

Full backups
Attachments included in the archive.

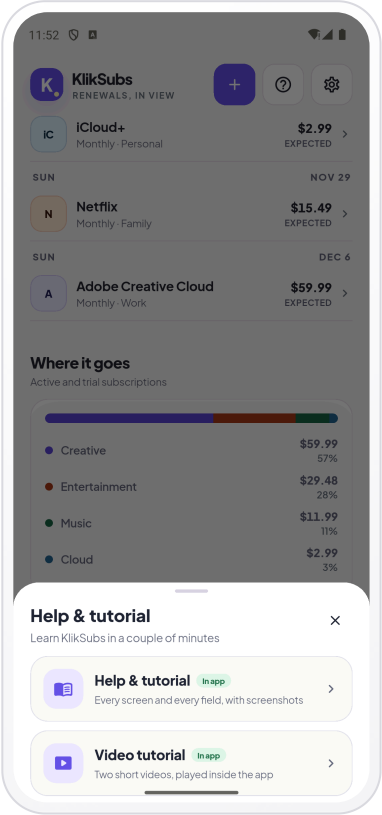

No ads
Ad requests are disabled for Pro.

Store unavailable? If the store did not return product details, nothing was charged. Existing Pro access is unchanged, and Restore Purchase stays available.

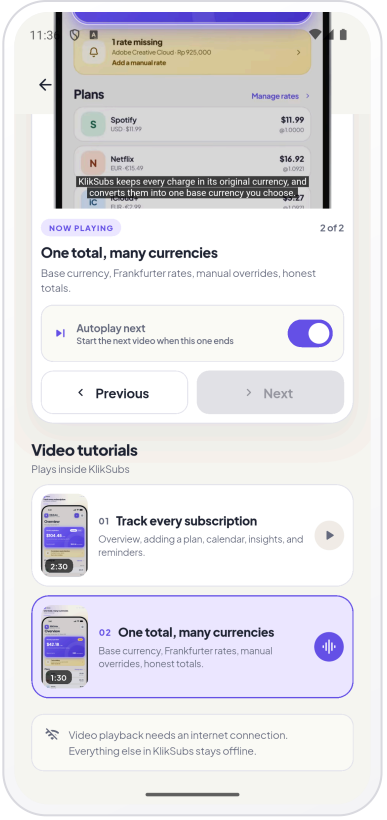

12 HELP & VIDEOS

The question mark in the top-right corner.

On the Overview, the **?** button opens two options: this guide (rendered inside the app) and the video tutorials (played inside the app). Neither option sends you to a browser.

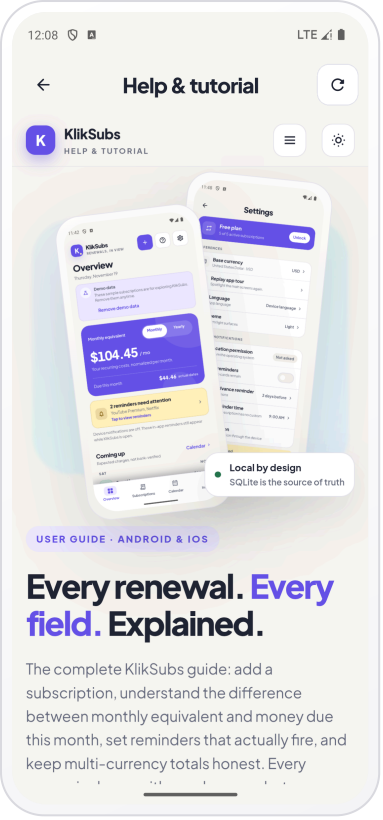

The help sheet, opened from the question-mark button.

In-app video: portrait player, autoplay-next switch, previous/next, and the playlist.

CONTROL	BEHAVIOR
Help & tutorial	Opens this guide in an in-app WebView. Needs an internet connection.
Video tutorial	Opens the in-app player. Two videos, streamed from YouTube.
Autoplay next	When on, finishing a video starts the next one. On the last video it stops.
Previous / Next	Switch videos manually. Buttons disable at the ends of the playlist.
Fullscreen	The player's own fullscreen button handles rotation and back navigation.

This guide inside the app — same content, no browser hand-off.

✓ **Offline note.** The rest of KlikSubs works offline. The guide and the videos need a connection because they stream from Cloudflare Pages and YouTube.

13 TROUBLESHOOTING

When a number or a reminder looks wrong.

The most common questions are about totals that look incomplete and notifications that do not arrive. Both are deliberate, explainable behaviors.

Why is my total labelled “partial”?

At least one plan uses a currency with no cached or manual rate. KlikSubs removes that plan from the completed sum instead of inventing a rate. Add a manual rate in Settings (Pro) or refresh rates while online.

Why is “due this month” smaller than “monthly equivalent”?

Monthly equivalent is a normalized run-rate. Due this month counts only charges scheduled in the current calendar month. A yearly plan that renews in March contributes to the run-rate but not to November’s due total.

Why didn’t a notification arrive?

Check three layers: notification permission, Android exact alarms, and battery optimization. In-app reminder cards can still work while device notifications are blocked. Use the test notification in Settings to isolate the problem.

Does KlikSubs connect to my bank?

No. There is no bank connection and no account. Payment history is manual. “Expected” means scheduled, not verified.

Can KlikSubs cancel a subscription for me?

No. It records a cancellation deadline, a cancellation URL, and a “Cancellation planned” state. You still cancel with the provider.

I hit five active subscriptions on Free. What happens?

The form is preserved, but saving is blocked. Pause or cancel a plan, or unlock Pro for unlimited records. Paused and cancelled records do not count toward the limit.

Why did a renewal date move to the 28th?

KlikSubs stores civil dates and preserves end-of-month anchors. A plan on the 31st becomes the last day of shorter months instead of silently sliding into the next month.

How do I move my data to a new phone?

Create a backup archive on the old phone, move the file, then restore it on the new one. Pro status is never imported from a backup; it follows the store account.

Why does the help page or video not load?

Both need an internet connection. The guide is served from Cloudflare Pages and the videos stream from YouTube. The rest of the app stays usable offline.

Is the UI in the videos a screen recording?

No. The videos use an authored reconstruction of the app’s screens. The screenshots in this guide are real captures from the Android build.

14 FIELD REFERENCE

Every field, grouped by where it lives.

A compact lookup table for when you already know the screen and just need the exact meaning of a field.

FIELD	WHERE	MEANING
Service name	Add / Edit	Display name used everywhere.
Card color	Add / Edit	Service tone used for icons and cards.
Amount	Add / Edit, Detail	Price in the plan's currency. Must be > 0.
Currency	Add / Edit	Original billing currency. Base currency on Free; any currency on Pro.
Billing cycle	Add / Edit	Weekly, monthly, quarterly, yearly, custom months.
Next billing	Add / Edit	Next expected charge date; civil date with end-of-month anchor.
Category	Add / Edit, filters, Insights	Groups plans for the category mix.
Group	Add / Edit	Personal, Family, Work, or custom (Pro).
Payment method label	Add / Edit	A label only; no card numbers or CVV.
Status	Add / Edit, Detail	Active, trial, paused, cancelled.
Reminder type	Add / Edit, Settings	Payment, trial, cancellation, contract.
Advance days	Add / Edit	0/1/3/7/14 or custom (Pro).
Notification time	Add / Edit, Settings	Local time for the OS alert.
Free trial end	Add / Edit	When the trial converts; becomes the first payment date.
Expected amount after trial	Add / Edit	The charge expected at conversion.
Cancellation deadline	Add / Edit, Calendar	Last date to cancel without another charge.
Contract end	Add / Edit, Calendar, Insights	End of a recorded minimum term (Pro).
Remaining payments	Add / Edit, Insights	Recorded count; never inferred (Pro).
Attachment	Add / Edit, Detail	Local invoice or contract copy (Pro).
Notes	Add / Edit, Detail	Free text for the record.
Cancellation URL	Add / Edit, Detail	Full http(s) link to the provider's page.
Base currency	Settings	Reporting currency for totals.
Manual rate	Settings	Overrides a remote rate until cleared (Pro).
Default reminder / time	Settings	Starting values for new plans.
Backup archive	Settings	Local .kliksubs file; attachments Pro.

FIELD	WHERE	MEANING
CSV export	Settings	Spreadsheet export, not a restore file.

✓ **One rule of thumb.** If a number can be computed, KlikSubs computes it from one shared engine. Monthly equivalent, due this month, annualized, and contract commitments stay distinct on purpose.
